Breaker Box Directory

The night a breaker half-trips is the worst time to learn what row 9 covers. Fifteen quiet minutes now buys you a calm minute later.

1. Open your panel, stand with a partner, and flip one breaker off at a time.
2. Walk the house together and find what went dark: lamps, outlets, appliances.
3. Write that room or fixture on its row, then flip it back on and move along.

Tip: circuits do not always match rooms. Gracefully accept that the bathroom and the hallway may share one line.

Panel is in: Main shutoff (top/center/labeled):

Date mapped: Whole-house shutoff tested:

#	ROOM / AREA	CONTROLS (FIXTURES, OUTLETS, APPLIANCES)	#	ROOM / AREA	CONTROLS (FIXTURES, OUTLETS, APPLIANCES)

If a slot turns out empty or the numbers do not match your panel, cross it off — every panel is a little different. Keep this sheet inside (or next to) the panel door.
